MISSISSIPPI DEPARTMENT OF FINANCE AND ADMINISTRATION
ADMINISTRATIVE RULE
MANDATORY ELECTRONIC PAYMENT OF VENDORS

I. General Purpose.

- A. The Mississippi Department of Finance and Administration (DFA) serves as the primary executive branch agency for fiscal management. Under §7-7-41, the State Fiscal Officer has the authority to prescribe rules and regulations concerning the issuance of warrants and other forms of payments for all departments, institutions and agencies of the state. This rule, unless otherwise noted, is to set as the standard that vendors of the State of Mississippi shall be paid electronically and shall be provided the supporting remittance detail by electronic means.
- B. This rule is a means for reducing the costs to produce paper warrants and remittance advices. The State has documented significant savings in the move to electronic payment and remittance. The State avoids the costs associated with printing, sorting, distributing, copying, and mailing warrants. Additionally, the State has determined that there are reduced opportunities for fraud and lost payments under this means of payment and remittance.
- C. Vendors benefit by receiving notification of pending deposits of funds and have options for interfacing the remittance data from the State into their accounts receivable systems.

II. Definitions.

- A. ACH: Automated Clearing House. Affiliated with the U. S. Treasury and the Federal Reserve System and used as the conduit for electronic payments and collections.
- B. EFT: Electronic Funds Transfer. Electronic Funds Transfer (EFT) provides for electronic payments and collections. EFT is safe, secure, efficient, and less expensive than paper check payments and collections. Issuance costs for EFT payments are approximately 80% less than the cost to issue the same payment on a paper warrant. EFT transactions use the ACH network associated with the Federal Reserve System.
 - 1. The State of Mississippi uses “standard EFT” for transferring funds to employee bank accounts for direct deposit of payroll payments and for some transfers to checking accounts of State agencies.
 - 2. The State uses expanded EFT in the transfer of funds and remittance information using PayMode™. The State has established PayMode™ as the default payment method for those payments and transfers requiring supporting remittance information.
- C. E-payment vehicle: Tool that captures the payment and remittance information and pushes it electronically to the designated vendor from the source system (MAGIC). The ACH is used to move the funds while a proprietary system is used to provide access to supporting remittance data and notification of the availability of funds to the State’s vendors.
- D. Existing Agreements: Individual agreements in place for the acceptance of electronic payments prior to the implementation of this policy.
- E. PayMode™: A Bank of America product, PayMode™ is the State’s present e-payment vehicle.

- F. MAGIC: Mississippi Accountability System for Government Information and Collaboration, the successor system for SAAS and SPAHRS.
- G. Vendor payments: Payments initiated and approved by State Agencies for various goods and services or as used to transfer funds to other governing authorities such as school districts, cities, and counties.

III. Requirements for Transitioning to E-payment Vehicle

- D. To register for PayMode™, vendors should go to the Bank of America's™ enrollment website at <http://www.bankofamerica.com/paymode/ms>.

COMMUNICATON AND COMPUTER ACCESS INFORMATION – EXHIBIT: F

Contractor shall provide their own long distance fax/telephone service which is available through AT&T.

MSH will provide modem quality line through the MSH telephone switch for external electronic communication and connectivity. Electronic communication between MSH and Contractor shall be achieved with MSH's e-mail provider and Contractor's e-mail provider.

Contractor shall provide their own computers, printers, software, and any other hardware/software necessary for connection and communication (e-mail, time, reports, etc.) to the Contractor's home office, unless otherwise approved by the MSH Information Management Director.

Contractor and Hospital understand and agree that the State of Mississippi's Enterprise Security Policy mandates that all remote access to and/or from the State network must be accomplished via Virtual Private Network (VPN) or using a web-based encrypted support method that is initiated from within the State network. If remote access is required at any time during the life of this agreement, Contractor and Hopsital agree to implement/maintain a VPN or utilize a web-based encrypted support method that is initiated from within the State network for this connectivity. The VPN must be IPSec-capable (ESP tunnel mode) and will terminate on a Cisco VPN-capable device (i.e. VPN concentrator, ASA firewall, etc.) on the State's premises. Contractor agrees that it must, at its expense, implement/maintain a compatible equipment/software solution to terminate the specified VPN on the Contractor's premises or utilize a web-based encrypted support method that is initiated from within the State's network.

If at any time connectivity needs to be initiated by the Contractor, a VPN must be utilized. The web-based encrypted support method should not be used as a substitute for permanent LAN-TOLAN VPN solution. If the web-based encrypted support method is utilized, it is understood that each session should only be established as needed for individual problems and supervised by Hospital personnel. At such time that Hospital personnel are unavailable to monitor the support session, said session must be terminated.

The parties further understand and agree that the State protocol standard and architecture are based on industry-standard security protocols and manufacturer engaged at the time of contract execution. The State reserves the right to introduce a new VPN protocol and architecture standard and require Contractor to comply with same (if using an IPSEC/ESP-based VPN), in the event the industry introduces a more secure, robust protocol/architecture and/or there is a change in the manufacturer engaged.
